DETAILED ACTION

REASONS FOR ALLOWANCE

1. Claims 1 – 8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest, either singularly or in combination, at least peripheral electrodes formed on an outermost portion of a semiconductor chip, internal electrodes, circuits, the peripheral electrodes and the internal electrodes being formed within openings provided in the insulating layer, and wherein rewiring is connected exclusively to either the peripheral electrodes which are not connected to the internal electrodes by the internal lines, or to the internal electrodes which are connected to the peripheral electrodes by the internal lines, and a wire is connected only to the peripheral electrodes connecting to external terminals using wire bonding. Seshan (U. S. Pat. No. 6,686,659) teaches peripheral electrodes formed on a semiconductor chip, internal electrodes, circuits, the peripheral electrodes and the internal electrodes being formed within openings provided in the insulating layer. However, Seshan does not disclose the peripheral electrodes formed on an outermost portion of a semiconductor chip and a wire is connected only to the peripheral electrodes connecting to external terminals using wire bonding, and wherein rewiring is connected exclusively to either the peripheral electrodes which are not connected to the internal electrodes by the internal lines, or to the internal electrodes which are connected to the peripheral electrodes by the internal lines as set forth in claims 1, 5 and 6.
